Stayz UI Development Test

Reviews Component

For this test we require a reusable list of reviews component to be built following the below guidelines and to match the attached design. How you implement it is up to you.

Guidelines

- Use HTML5 for your template
- Use AngularJS for your JavaScript
- Build for all devices from mobile through to desktop screen sizes
- Use a JSON file for the review content to imitate an API service
- Browser support:
    - IE10+
    - Google Chrome (latest)
    - Firefox (latest)
    - Safari (latest)
- If your completed code requires any instruction in order to get up and running (i.e. grunt server) please provide documentation on how to do so
- Include a unit test for your component using the framework of your choice

Functionality

- On page load, component should show the first three reviews and any owner responses to those reviews
- On interacting with the "Show more" button, the remaining reviews should toggle and the button text switches to "Show less"
